

The Poundmaker Project area is composed of two blocks. The Poundmaker Main Block which has been optioned from Wildcat Resources and consists of 72 claims that cover 11,980ha. The Poundmaker North Block owned 100% by Marum and consists of 2 claims that cover 415 ha. The total Poundmaker Project Area covers of 74 claims that total 12,431 ha. Excellent access is provided by many logging roads and trails throughout most of the property.

The Poundmaker occurrence is underlain by foliated hornblende-quartz diorite which has been sheared along a structure trending 310° along which quartz veins have been mapped underground and on surface over a strike length of 600m and up to 15m wide. Total historical production is estimated at 645 oz, and samples from the muck pile have been reported at 0.9-20.2 g/t Au and in 1923, and the average grade was reported as 33 g/t Au in the upper two levels.

The Rio Gold zone was identified by Wildcat Resources and represents a series of quartz veins striking northeast that have been tested by 30 trenches over a area of about 600m \times 2500m. Analyses of grab samples from the quartz vein gave values of 0.24-50.1 g/t Au in 48 samples.

Off the project areas to the west-central part of the property, the Grand Central occurrence where a 1m shear zone in granodiorite from a quartz vein 30-40 cm wide. Government surveys report mining of 930g of gold from 272 tonnes of rock (3.4 g/t Au). Three grab samples from the muck pile were reported as 1.0-40.5 g/t Au.

The Clinton occurrence contains millerite (NiS) in a shear zone containing ankerite in serpentinized pyroxenite.

At the EWL-1 occurrence, 17 drill holes intersected 1-24m sections of sedimentary rocks and iron formation with 5-30% pyrite and pyrrhotite from which six samples reported 0.34-4.11 g/t Au and up to 0.48% Cu.

The 2009 exploration program will consist of surface prospecting utilizing the results of airborne magnetic data, reconnaissance prospecting during 2008 together with the data obtained from the recently flown LiDAR survey.
